

NET SCAVENGER HUNT

When people think of robots, they often think of fictional robots like R2-D2 and The Terminator. But real robots are helping people every day in a wide variety of situations, from cleaning living rooms to exploring the surface of Mars. Using the Internet, see if you can find robots that fit into these categories:

Robots used in people's homes (consumer robots)

Robots used by doctors and hospitals (medical robots)

Robots used to help those in harm's way (military robots and/or search and rescue robots)

Robots used for scientific research (space exploration robots and/or other research robots)

Robots used for education (educational robots)

S.P.A.R.K.
